Art Unit: 1755

The Examiner updated the status of the parent applications added to the first page of the specification in the preliminary amendment of 12 September 2003 by Examiner's amendment.

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-9 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-18 of U.S. Patent No. 6,652,768. Although the conflicting claims are not identical, they are not patentably distinct from each other because the ferrite composition of the patent suggests that claimed.

The claims of the patent teach ferrite composition comprising Mn and Zn, optionally at least one of Mg, Ni, Cu and Li and having a content of carbon that is less than 96 weight ppm. The claimed carbon content ranges all overlap the ranges claimed in the present application and the claimed composition overlap the compositions claimed in the present application. Product claims with numerical ranges which overlap prior art ranges were held to have been obvious under 35 USC 103. *In re Wertheim* 191 USPQ 90 (CCPA 1976); *In re Malagari* 182 USPQ 549 (CCPA 1974); *In re Fields* 134 USPQ 242 (CCPA 1962); *In re Nehrenberg* 126 USPQ 383 (CCPA 1960).

Art Unit: 1755

Claims 11-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 10, 17 and 18 are allowable over the cited art of record.

The claimed electronic components having the claimed compositions are not taught or suggested by the cited art of record. The claimed ferrite composition including at least Ni, Cu and Zn and having a content of carbon that is greater than 9.7 weight ppm and less than 52 weight ppm is not taught or suggested by the cited art of record.
